

What to do if you are a close contact of someone who is diagnosed with COVID-19

- This information is for people who were in close contact with someone who has COVID-19. Close contact means being closer than six feet or two meters apart for 15 minutes or more while the person was infectious, which starts two days before any symptoms began (or for people without any symptoms, two days before the day they got tested) and continues until they are recovered.
- Close contact does not mean being more than six feet or two meters away in the same indoor environment for less than 15 minutes, walking by, or briefly being in the same room.

Quarantine at home and watch for symptoms for 14 days:

- Day 0 is the day you were last in contact with the person.
- Watch for symptoms, even if mild, of cough, shortness of breath or difficulty breathing, fever, chills, repeated shaking with chills, fatigue, muscle pain or body aches, headache, sore throat, or new loss of taste or smell, congestion or runny nose, nausea or vomiting, or diarrhea.
- Don't leave home, except to get medical care. Wear a cloth mask if you need to leave home.
- Call ahead before visiting a health care provider or emergency department.
- If possible, stay in a specific room in your home and use a separate bathroom.
- Stay at least six feet away or two meters from others in your home at all times. Wear a cloth mask if you're in any room with other people, unless you have trouble breathing. Don't share household items.
- Stay connected with others – use technology to communicate with friends and family.

If after 14 days you still don't have symptoms, you may end your quarantine.

Daily cleaning and washing:

- Clean and disinfect surfaces in your home. If you are staying in a separate room and using a separate bathroom, clean them yourself. Have someone else clean the other areas of the home.
- Thoroughly wash household items, like utensils, after using.
- Wash your hands often with soap and water for at least 20 seconds. Use alcohol-based hand sanitizer if soap and water aren't available.

If at any point you develop symptoms:

- Contact your health care provider by phone to find out if you should be evaluated. Let them know you are quarantining at home for novel coronavirus because you are a close contact of someone who is diagnosed with COVID-19.
- If you're having a medical emergency, call 9-1-1 or go to the hospital.
- You may also try calling your state or local health department if you do not have a doctor.
- People with mild illness can treat their symptoms at home: get plenty of rest, drink plenty of fluids, and take fever-reducing medication if needed.

When to get medical care immediately:

If you have **trouble breathing, chest pain, confusion, or changes in color on your lips, gums, face, around the eyes, or nails**, seek medical care immediately. When you call for medical care, tell the provider or 911 that you are quarantining at home because you are a close contact of someone with COVID-19.

Difference between isolation and quarantine

	Self-isolation	Self-quarantine
For whom?	People with symptoms of COVID-19 <ul style="list-style-type: none">• For people with COVID-19 who aren't sick enough to be hospitalized, or• For people who are waiting for test results	People with no symptoms of COVID-19 <ul style="list-style-type: none">• Close contacts of people with COVID-19
For how long?	Until recovery, which happens when all three have happened (unless you get different instructions from your medical provider): <ol style="list-style-type: none">1. It's been 24 hours of no fever without the use of fever reducing medication, and2. Other symptoms have improved, and3. At least 10 days have passed since your symptoms first appeared. <p>Or if you didn't have symptoms when you were tested, recovery is when 10 days have passed since the date of your first positive test and you continued to have no symptoms.</p>	For 14 days since the date of possible exposure. The day of the exposure is Day 0. You have the option of getting tested during your quarantine period if you have not had any symptoms. On or after day 7, you can get a test through your provider or a testing site. Remain in quarantine until you get your results. If the results are negative, and you still don't have any symptoms, you can discontinue quarantine.
What does it mean?	Staying home 24/7 in a separate room in the house, using a separate bathroom, avoiding contact with others. Wear a mask if you're in a room with other people, unless you have trouble breathing.	Staying home 24/7, monitoring for symptoms, and practicing social distancing. If possible, using a separate room and bathroom. If you become symptomatic, your close contacts should also self-quarantine.
